

Super Bowl Offensive Statistics 1966-2021

Exploratory Analysis

I. INTRODUCTION

As a group, we choose to do our data on offensive Super Bowl stats. This included Superbowl Offensive Stats from 1966-2021. This data had 23 columns and 729 rows. Passing and rushing stats were the most important, and Team and player names least important. We found our data on Kaggle. The reason we chose to use this data was because we are avid sports fans and wanted to compare past Super Bowl stats to see in future games.

II. SUPER BOWL DATA SET DESCRIPTION

This data set contains 729 rows with 23 columns with various data types. A listing of data types and missing data is in **Table 1**. For data types, all our missing data were nominal and float numbers that we had to correct for the Pandas data type. For example, the qbr was nominal/float64. For the missing data we calculated it by doing the number of missing entries divided by what the total sum was supposed to be.

Table 1: Data Types and Missing Data

<i>Variable Name</i>	<i>Data Type</i>	<i>Missing Data (%)</i>
V1 – times sacked	Nominal, float	49%
V2 – sack yards	Nominal, float	45%
V3 – qbr	Nominal, float	85%

III. Super Bowl Data Set Summary Statistics

For this section we will be displaying tables of our data set for Super Bowl Offensive Data. By using functions like .describe, .value_counts, and .corr we were able to show a variety of results and patterns.

IV. DATA SET GRAPHICAL EXPLORATION

A. Distributions

- Not very useful
- Uneven player distribution
- Helps moving forward

B. ScatterPlots / Pairwise Plots

- Very helpful for majority numerical data
- Display patterns and direct relationships
- Highlights outliers

C. Barcharts (categorical variables)

- Able to implement categorical data
- Compare categorical to numerical
- Easiest graph to understand Supports passing data

D. Histogram

- Disproportionate
- Not very useful for our focus
- Similar to distribution graphs

E. Bivariate Analysis –Pairplot

- Compares 3 variables together
- Overview of rushing statistics
- Scatter>Bar

V. SUMMARY OF FINDINGS

We came to conclusion that defense plays very well in the super bowl. We only found one QB that did really well in the super bowl and threw for 6 passing touchdowns which was our only outlier. We also have found that in the super bowl, that the passing game was a lot more involved than the rushing game. We also were surprised to see that there were higher passing touchdowns than rushing touchdowns in the super bowl.
